Advice

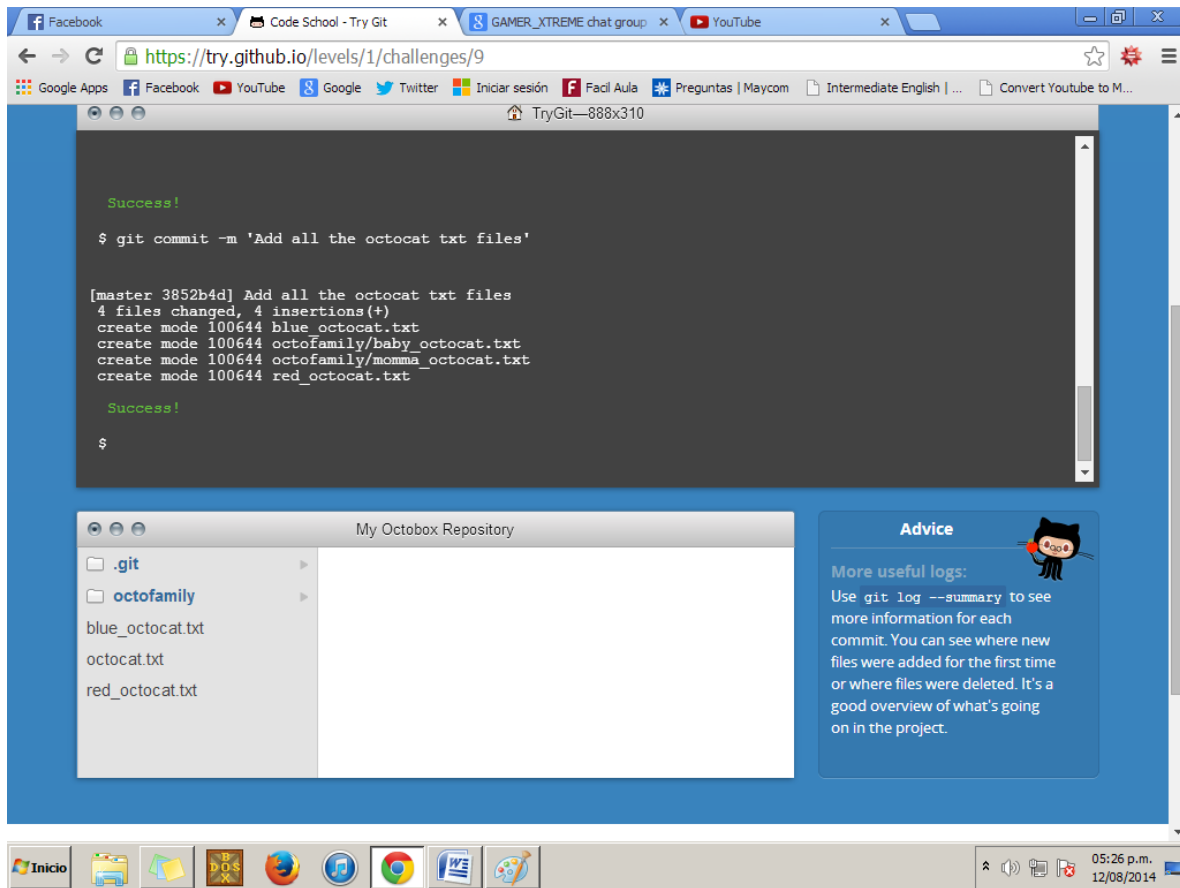

Wildcards:

We need quotes so that Git will receive the wildcard before our shell can interfere with it. Without quotes our shell will only execute the wildcard search within the current directory. Git will receive the list of files the shell found instead of the wildcard and it will not be able to add the files inside of the

**Advice**

git remote:  
Git doesn't care what you name your remotes, but it's typical to name your main one `origin`.

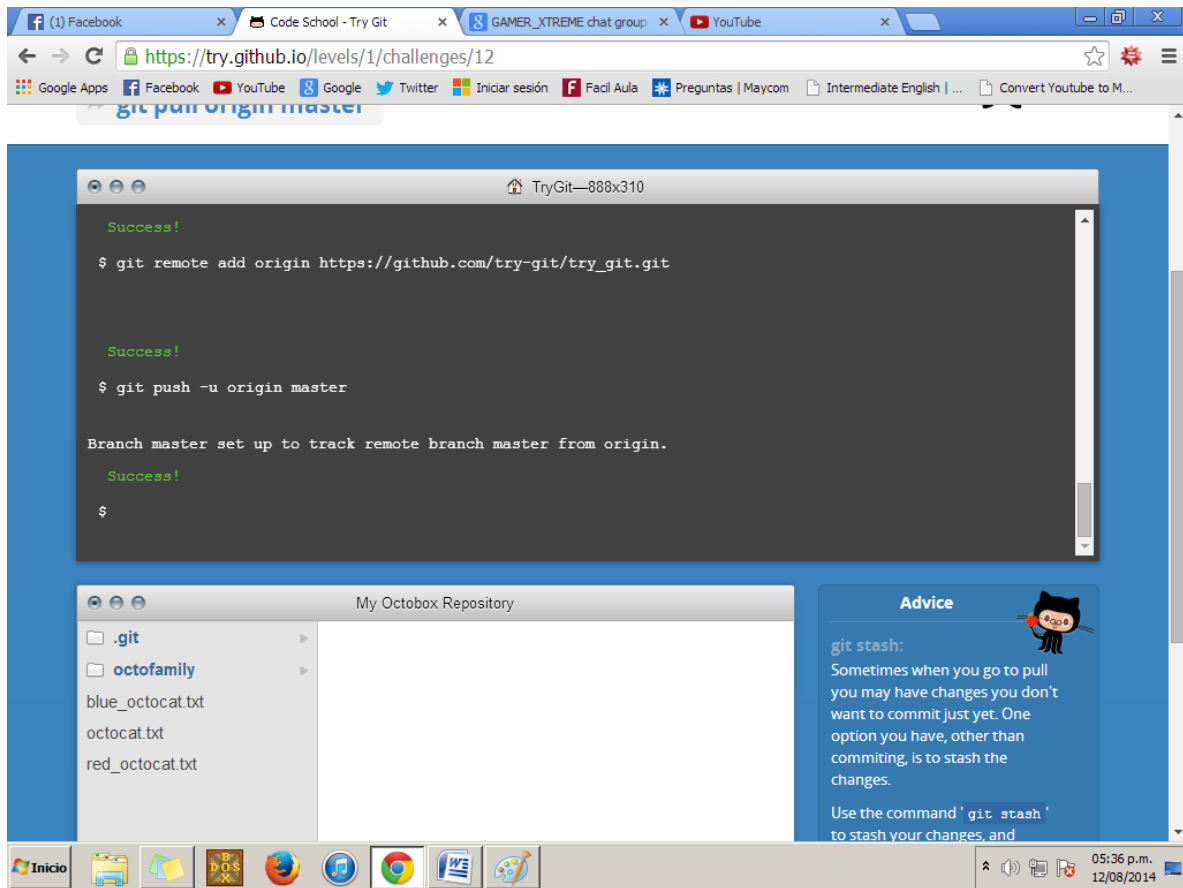

It's also a good idea for your main repository to be on a remote server like GitHub in case your machine is lost at sea during

Commit Etiquette:

You want to try to keep related changes together in separate commits. Using 'git diff' gives you a good overview of changes you have made and lets you add files or directories one at a time and commit them separately.

Advice

#### Pull Requests

If you're hosting your repo on GitHub, you can do something called a pull request.

A pull request allows the boss of the project to look through your changes and make comments before deciding to merge in the change. It's a really great feature that is used all the time for remote workers and open-source

Advice

Merge Conflicts

Merge Conflicts can occur when changes are made to a file at the same time. A lot of people get really scared when a conflict happens, but fear not! They aren't that scary, you just need to decide which code to keep.

Merge conflicts are beyond the scope of this course, but if you're interested in reading more, take

Learning more about Git

We only scratched the surface of Git in this course. There is so much more you can do with it. Check out the Git documentation for a full list of functions.

The Pro Git book, by Scott Chacon, is an excellent resource to teach you the inner workings of Git.
